WANZL NORDIC

your local business partner and one-stop-shop within retail and store solutions

■ **Wanzl Nordic is a Nordic developer and manufacturer of store solutions.** We are dedicated to the store. We assist our customers in attracting attention, ripening purchase decisions and creating sales. And we have more than 60 years of experience in everything from design of fashion and specialty shops to supermarkets.

Wanzl Nordic can be with you all the way from development and production to roll-out. And we can deliver to the local market or follow the ambitions of our customers into the world. Our main office is located in Denmark, and we have

subsidiaries in Norway, Sweden and Finland. Wanzl Nordic employs approx. 330 people, and annual sales amount to slightly above DKK 500 million. We are a part of the German Wanzl Group, who is represented in most of the world.

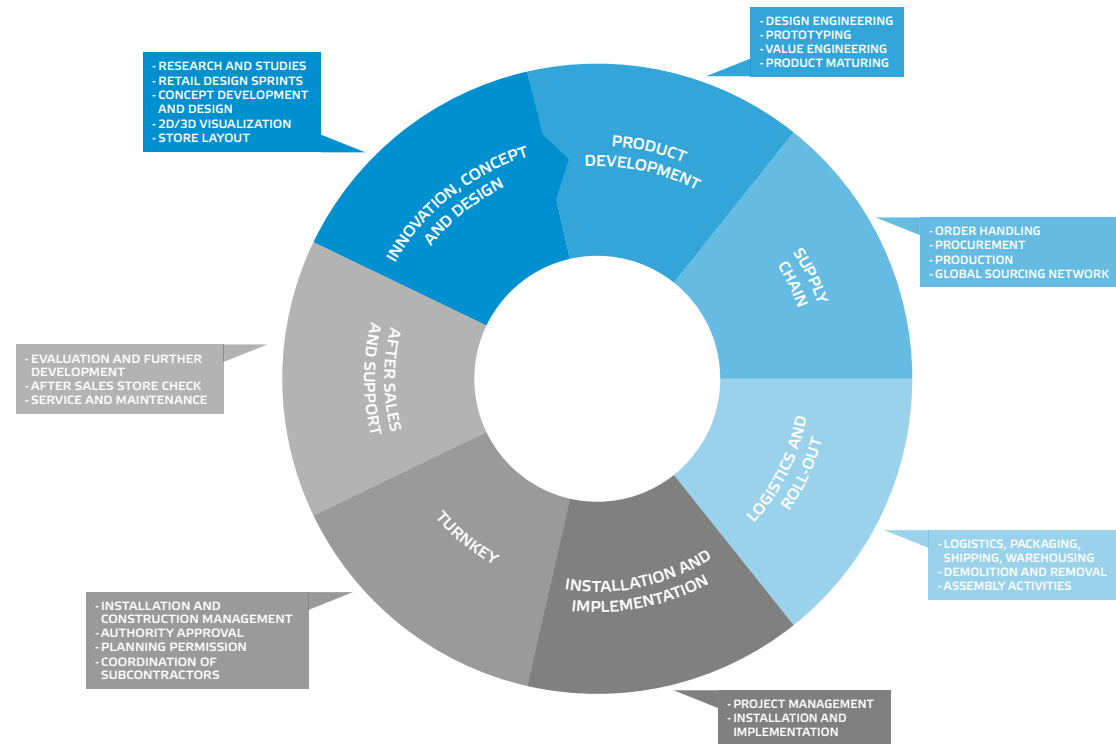

What you have here is Wanzl Nordic’s catalogue of our standard system, The Basic 2 standard shelving system is one among several systems in Wanzl Nordic’s assortment.

If you have questions regarding the brochure, the system or Wanzl Nordic, please just call us – +45 87 612 200.

Wanzl Nordic reserves the right to any changes in content without notice.

- We do not assume responsibility for any printing or other errors in the catalogue
 - We reserve the right to make changes in the products, the assortment and specifications without notice
 - Previously published product specifications are hereby rendered invalid

Solution cycle HOW WE ROLL

Competences

If you choose Wanzl Nordic as your shop fitting partner you will open a well-assorted tool box. Due to the fact that Wanzl Nordic has divided the process into minor steps from the time that the idea has been captured and concretised until the time of a completed shop, we provide the possibility for the customer for selecting the tools necessary for the project concerned. This concerns development, project design or implementation – or all three stages.

I WE ARE HERE TO SOLVE YOUR TASK

– not to sell you as much as possible

We can supply everything from turnkey retail to shop-in-shops and displays. And you, of course, decide which services you need. Some use us for professional discussions and shop design, others as an efficient manufacturer or an experienced roll-out partner.

Shopfitting

Wanzl Nordic has a large and well-proven standard range of shopfitting, as a supplement to the individually designed solutions. Various shop and warehouse systems featuring infinite combination possibilities and finishing degrees, so that it is also here possible to create an individual expression. We are moreover capable of supplying a wide range of shopping trolleys, shopping baskets, entrance systems, check-outs and various transport solutions.

Specialists

Your solution is best created by like-minded people. Therefore Wanzl Nordic is divided into three teams, each dedicated to their own special field within shopfitting for the retail sector: Fashion & Lifestyle, Specialist Trade and Food Retail. You will therefore always receive skilled counselling from Wanzl Nordic tailored to your market and your daily life.

Development

If, for example, you want to change your position in the market, adjust to a new target group or optimize your costs, Wanzl Nordic can devise a process of development which will ensure that you reach your targets. From counselling and shop design to prototype and test. All the time in close dialogue with your organization so that all aspects are considered in the final solution.

Production and sourcing

Wanzl Nordic has its own wood and metal production as well as a comprehensive network of carefully selected international sub-suppliers. This creates maximum flexibility for you as a customer. In all manufacturing we choose the optimum production solution based on your needs. Which means that reaction time, price, delivery and quality is all tailored to your needs as a customer. We also source production from remote markets – like China.

Execution/roll-out

ROI is not generated until your store solution is complete, with goods on the shelves. And then it will hopefully work for many years. Wanzl Nordic therefore offers an efficient shop roll-out set-up. Logistics and warehousing, installation and setting-up, service and replacement. As well as continuous upgrading, so that your solution is always up-to-date.

| ONE SYSTEM, MANY FACES

■ When using Basic 2, you will get a presentable, profile creating, flexible and customer-friendly store design, which at the same time is easy to handle for the employees in the store.

The Basic 2 system offers numerous possibilities of combination and makes up the optimum basic shopfitting solution for virtually all sectors. Whether grocery stores, garden centres, hardware shops, book stores, radio/TV shops or something entirely different, Basic 2 will meet the demands for attractive and well-arranged presentation, which contributes to creating the profile and expression of the store.

The Basic 2 shopfitting will also enable you to underline the overall concept of the chain and set focus on seasonal-, campaign- and incentive sales. The system includes several decoration effects making it possible to establish targeted sales, while at the same time achieving high-profiling of the store.

Moreover, the Basic 2 system offers a variety of accessories as well as varying column heights, foot depths and module measurements, which increase the flexibility.

Should you need special components, we also manufacture such.

| THIS IS HOW YOU USE BASIC 2

A few words regarding basic 2

Basic 2 is a flexible and functional shop fitting system, and all details have been brought into focus. The system is easy to handle, has loose feet, can be supplied with different back panel solutions and consist of basic modules in 60 or

90 cm for wall or floor as well as wall uprights for presentation of lightweight items.

Besides, we have a comprehensive range of accessories.

I COMPONENTS

In this chapter we focus on the basic components that Basic2 consists of: Uprights, feet, locks, back panels etc.

I COMPONENTS

Basic 2 can be supplied as standard modules of 90 cm. The columns are equipped with a slotting distance of only 32 mm which provides effective adjusting of capacity and utilisation of space. The back panels can easily be exchanged for differentiated exposure of articles and profiling purposes.

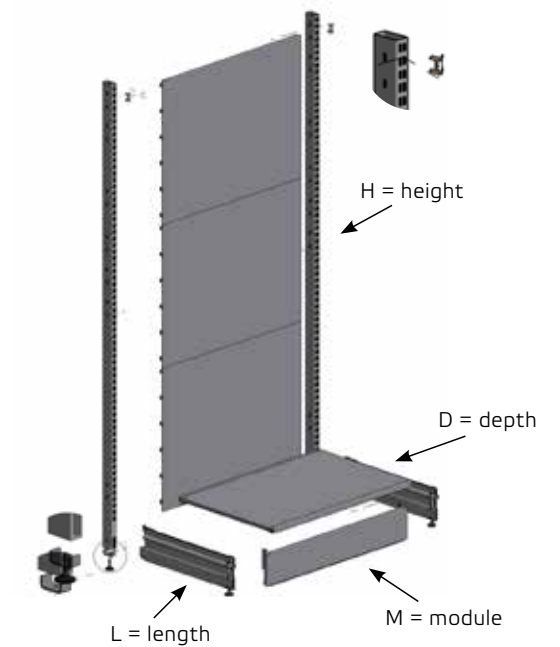

The system is supplied with loose feet minimising the shipment expenses and handling. Moreover, the system is simple and easy to assemble in the shop minimising the time consumption in connection with establishment and re-construction. Special components will be manufactured according to demands.

Accessories

I BACK PANEL PLANE

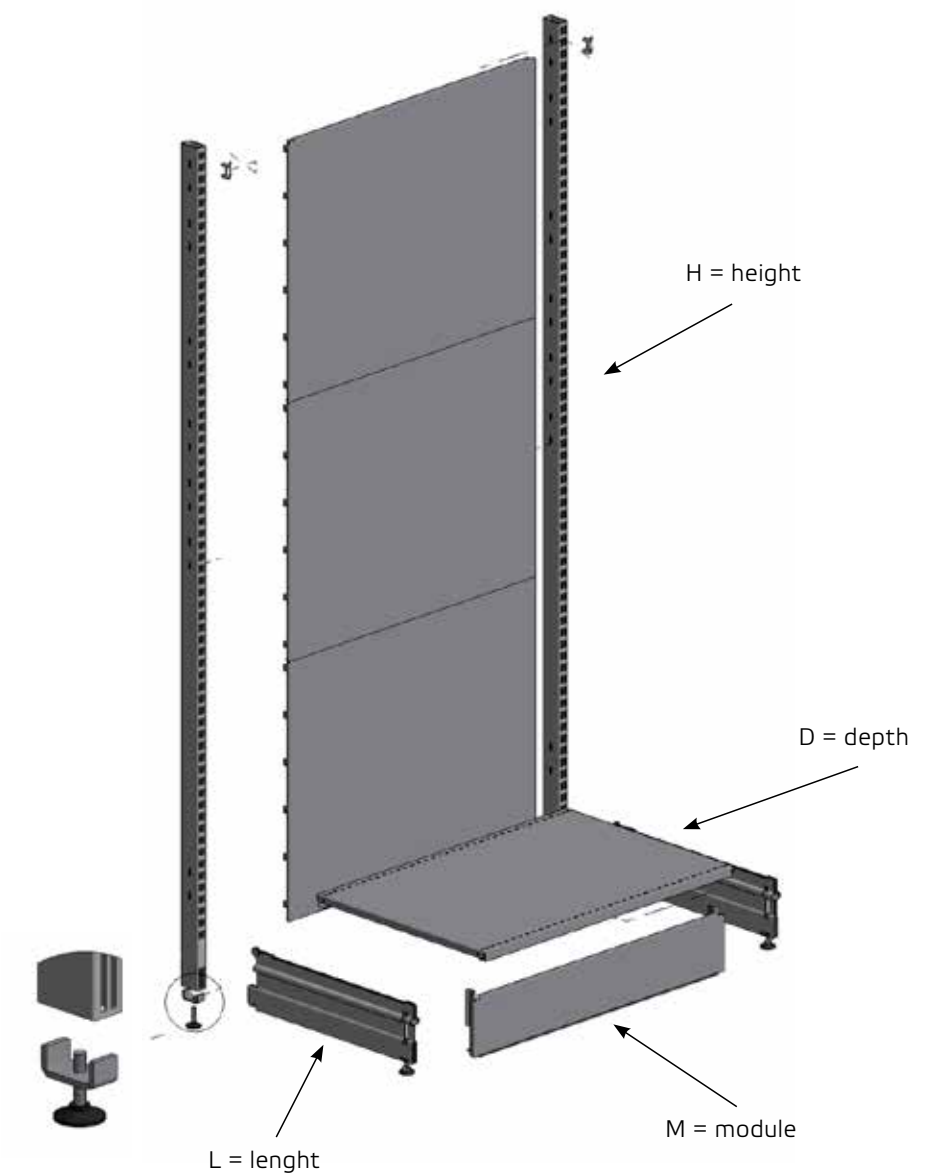

Intro for panel plane system

Wall and floor system with smooth steel backpanel. The backpanel closes off the background and is available in numerous colours, which contributes to supporting the expression and profile of the store. Can be installed with for example hook rails and brackets for shelves mounting.

Facts:

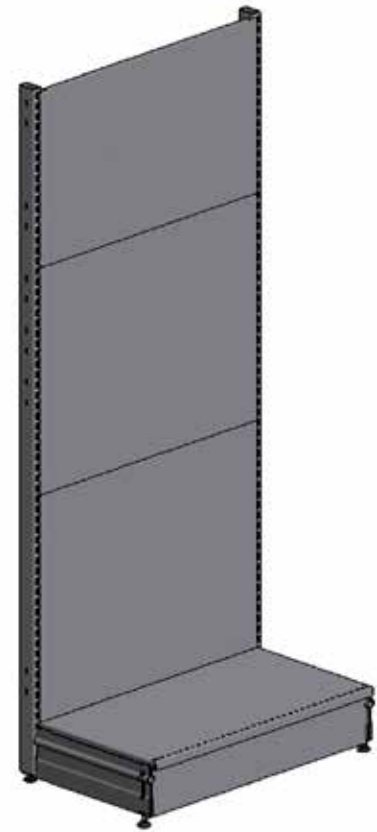

- Available in numerous colours
- Mounted at the front of the column
- Can be installed with hook rails and brackets

The following examples are all based on a 60x30 upright.

I COMPOSITIONS WALL

In the following chapter, you find the different compositions for wall mount and their product numbers.

I COMPOSITIONS FLOOR

In the following chapter, you find the different compositions for floor and their product numbers.

FLOOR SOLUTION – PANEL PLANE

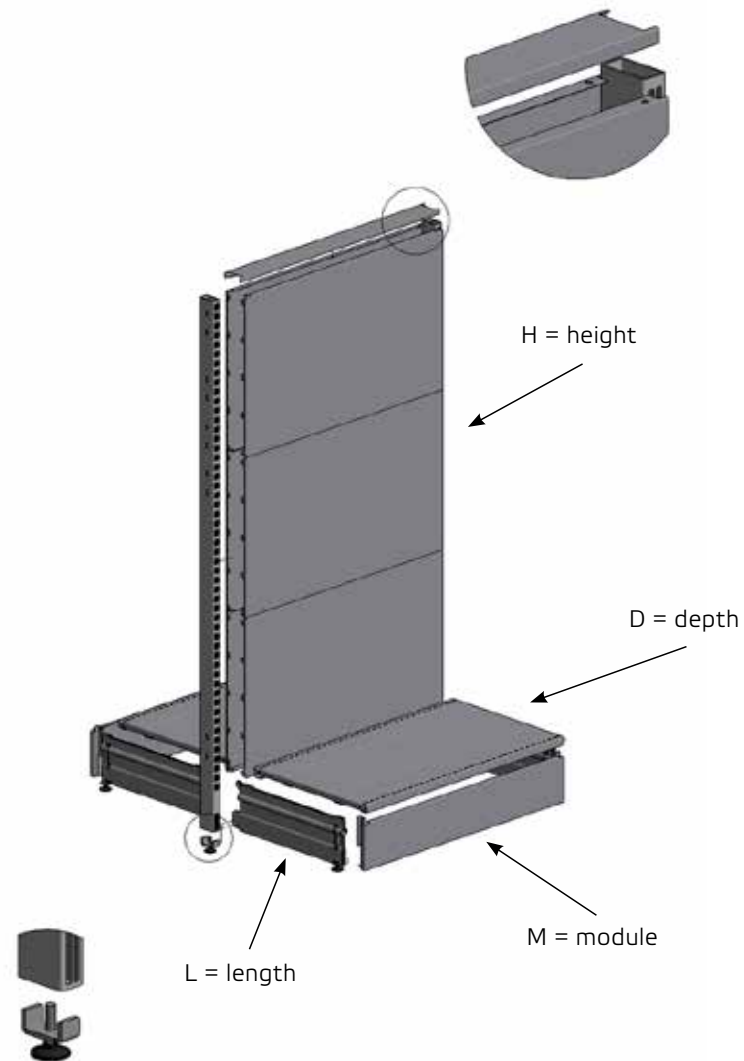

Intro for panel plane system

Wall and floor system with smooth steel backpanel. The backpanel closes off the background and is available in numerous colours, which contributes to supporting the expression and profile of the store. Can be installed with for eample hook rails and brackets for shelves mounting.

Facts:

- Available in numerous colours
- Mounted at the front of the column
- Can be installed with hook rails and brackets

The following examples are all based on a 60x30 upright.

COLOURS & MATERIALS

From our wide assortment of colours and materials you can choose exactly the option which suits your store environment. Here you find examples of standard colours, laminate and melamin surfaces. In addition to these standard colours and materials, we can also provide more options. Ask for more information.

Choosing the right colour and material for your store environment is important, our designers are ready to help you, so please contact us if you want our advice.

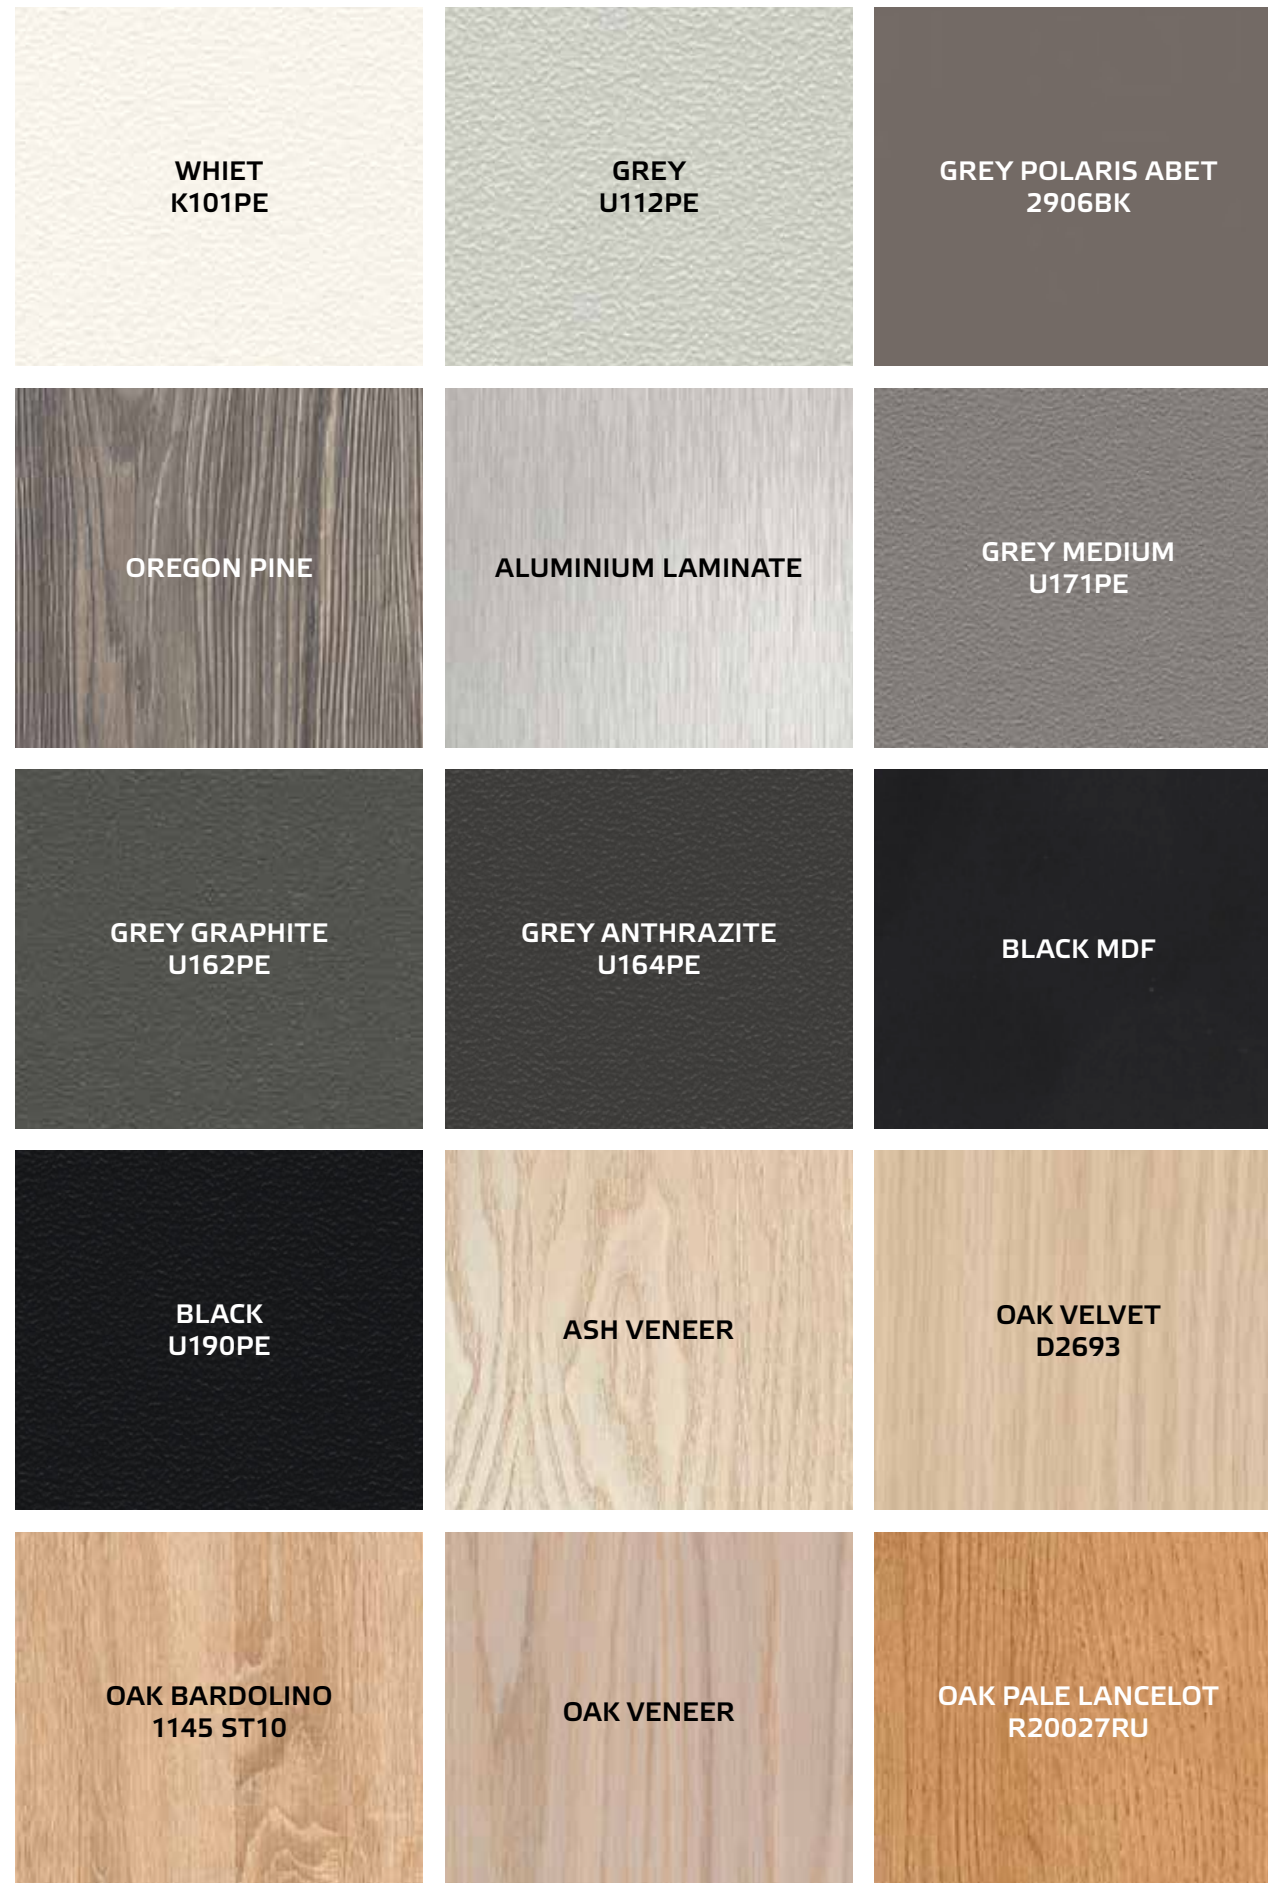

RAL-COLOURS

Our standard colours are mainly defined in RAL color system, others are mixed colours with structure – we have samples available, please ask us for further information and details if you have any special needs.

RAL colours are described by a four-digit number. RAL colour system is often used in connection with colour powder coating for surface treatment of metal.

See our Standard Colors on the next page.

MELAMINES AND LAMINATES

The surface and finish you choose is decisive for how the shop appears. Our comprehensive selection of melamines and laminates gives you the possibility of finding exactly the right surfaces for your shop.

Melamine is a plastic material, which is pasted on chipboards to give them a colour on a certain surface. Melamine is the inexpensive alternative to laminate, and it works fine with most surfaces. It is not as hard-wearing as laminate, so it is typically used for vertical surfaces, but can also be used for shelves.

Laminate is the sturdy alternative to melamine. The base consists of many layers of paper which are glued together to give it durability. On top of

the paper layers is glued a thin film with a colour or structure and on the very top, a transparent wearing surface. Laminate is used for surfaces exposed to heavy wear conditions, such as counters.

Our materials specialists will gladly assist you in deciding which material to use in each individual case.

Contact Wanzl Nordic, and let us discuss which will be the right surface for your arrangement.

I INSTALLATION MANUALS LOAD SURVEY

INSTALLATION MANUAL – PANEL PLANE/PERFEX

3. For safety reasons, safety clips must be mounted correctly. Fit safety clips into the top slits (same slit in which the hook on the panel is fitted) on all uprights.

Note: When using metal back panels without space bars, the arrangement must always be secured by means of safety clips. Alternatively, the combination space bars/ metal back panels can be used.

See 088-4022-0 for fitting of space bars.

2. Fit back panels into slits at the front of the uprights.

4. Fit plinth into the slit of the side of the base leg.

1. Fit base leg on upright
Note: Base leg must be fitted before fitting of lock, which is fitted in the bottom of the upright.

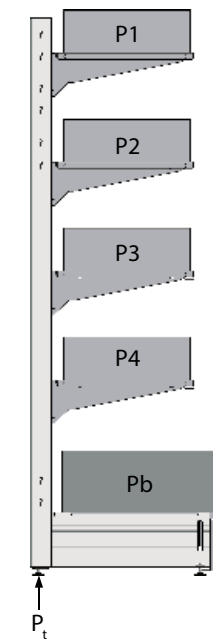

5. Place shelf on the base leg.

LOAD SURVEY

LOAD SURVEY – CENTRAL ADJUSTER

Concerning wall section (1-sided load) and floor section (2-sided load) the below-mentioned is valid:

- The table values are valid for adjustable feed in joint and consecutive uprights
- The load has to be calculated according to the heaviest loaded section
- The load is evenly distributed
- Also on both sides of the floor section
- Wall section without wall brackets

$$P_t = \frac{P_1 + P_2 + P_3 + P_4 + P_b}{2}$$

P = Load
P_t = Load on central adjuster

WALL SECTION

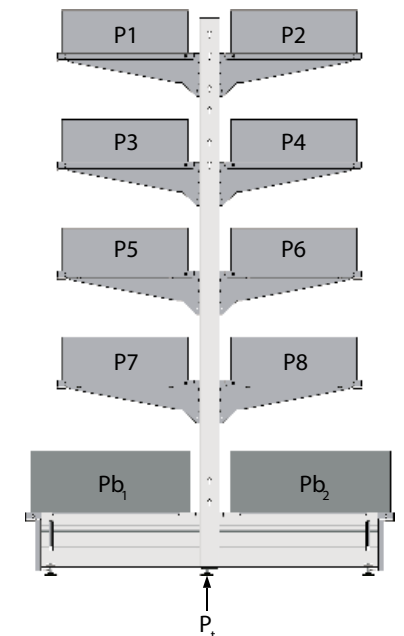

Foot	Max. load
60 X 30	550 KG
80 X 30	550 KG

$$P_t = (P_1 + P_3 + P_5 + P_7 + \frac{P_{b1}}{2}) + P_2 + P_4 + P_6 + P_8 + \frac{P_{b2}}{2}$$

P = Load
P_t = Load on central adjuster

FLOOR SECTION

Foot	Max. load
60 X 30	275 KG
80 X 30	275 KG

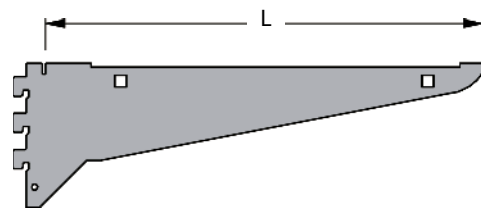

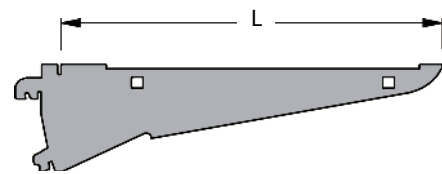

LOAD TABLE – BRACKETS

The table values are dependent on:

- Correct position of the brackets in slots
- Bracket and slot must be compatible
- Load is evenly distributed
- Load is static

Table values are stated in kg and make up maximum loads. The load is stated as load on shelves. Upon tilting of the adjustable type (KNE) the recommended load is reduced by about 50 per cent.

Length L	Max. load	
	Adjustable	Fast
20 cm	85 kg	180 kg
30 cm	75 kg	160 kg
40 cm	70 kg	140 kg
45 cm	60 kg	110 kg
50 cm	50 kg	80 kg
60 cm	40 kg	70 kg

LOAD TABLE – WIRE SHELF AND SHEET METAL SHELF

The table values pre-suppose:

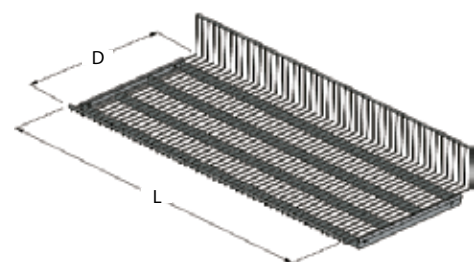

- Load is evenly distributed
- Shelves are chosen from Wanzl Nordics standard catalogue

Values are stated in kg and exclusively related to deflection of shelf.

$$\text{Deflection} = \frac{L}{200}$$

Thus the values are valid for both shelves used as bottom shelf or fixed foundation.

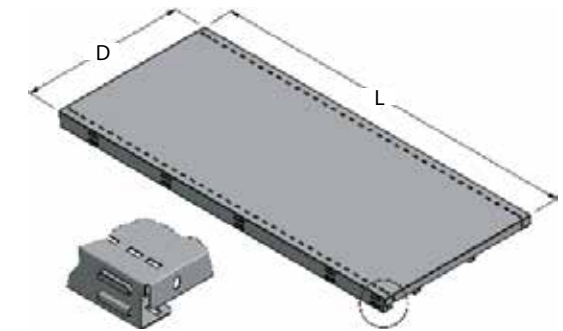

The values are not valid upon utilisation of shelf brackets/ consoles, since bracket/console can only carry limited loads. Refer to table for recommended loads on brackets.

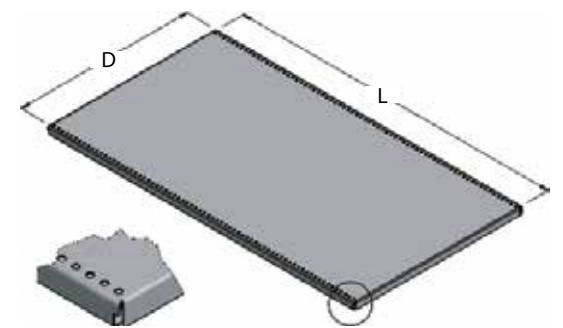

Depth D	Length L	
	60 cm	90 cm
20 cm		67 kg
25 cm	151 kg	67 kg
30 cm	151 kg	105 kg
35 cm	151 kg	105 kg
40 cm	304 kg	135 kg
45 cm	236 kg	135 kg
50 cm	304 kg	165 kg
60 cm	304 kg	203 kg

Depth D	Length L	
	60 cm	90 cm
20 cm	135 kg	65 kg
25 cm	475 kg	225 kg
30 cm	430 kg	195 kg
40 cm	645 kg	295 kg
50 cm*	575 kg	265 kg
60 cm*	575 kg	265 kg
70 cm**		405 kg
80 cm**	605 kg	290 kg

* We recommend the use of our fixed KNF bracket.
 ** Recommended only as bottom shelf.

Depth D	Length L	
	60 cm	90 cm
20 cm		150 kg
30 cm	305 kg	160 kg
35 cm		180 kg
40 cm	595 kg	390 kg
45 cm		390 kg
50 cm	700 kg	430 kg
60 cm	700 kg	435 kg

LOAD TABLE – MAX TORQUE

Table values are calculated including a safety factor of 1,5. Table values are calculated on the bases of upper limit values for deflection U_{max}

$$U_{max} = \frac{H}{50} = \frac{167}{50} = 3,4 \text{ cm} \quad H = \text{Height for } U_{max}$$

Calculation of total torque:

M_{shelf} is calculated for each shelf and accumulated to M_{total} Except from the bottom shelf.

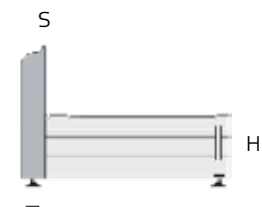

Precondition:

- Load P is evenly distributed on the shelf
- Shelves are evenly distributed on the upright
- Max. height for top shelf is 167cm

When height for top shelf is $H_{measured} > 167 \text{ cm}$ the calculated value has to be corrected by factor K:

$$K = \frac{167}{H_{measured}}$$

Foot

MAX. TORQUE (KGM) – UPRIGHT

60 x 30	80 x 30
53 kgm	112 kgm

D = shelf depth (m)
P = load (Kg)
M = torque (Kgm)

Ex. $M_{shelf} = P \times \frac{D}{2}$

Ex. $M_{total} = P_1 \times \frac{D_1}{2} + P_2 \times \frac{D_2}{2} + \dots + P_n \times \frac{D_n}{2}$

$M_{total} = M_1 + M_2 + M_3 + \dots + M_n$

When $H_{measured} > 167 \text{ cm}$ corrected by factor K

Ex. $M_{total} = \frac{M_1 + M_2 + M_3 + \dots + M_n}{K}$

$M_{total} \leq M_{tabel}$

Depth L	Max. load	
	Adjustable	Fast
20 cm	85 kg	180 kg
30 cm	75 kg	160 kg
40 cm	70 kg	140 kg
45 cm	60 kg	110 kg
50 cm	50 kg	80 kg
60 cm	40 kg	70 kg

PRE-CONDITIONS LOAD SURVEY

■ To ensure optimum and correct utilisation of equipment as well as to ensure the validity of the load-table's value, the below-mentioned requests have to be met.

When fitting

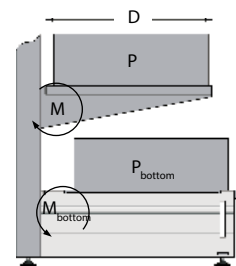

- Assembled and secured according to instruction for the individual product
- Mounted on an even and solid foundation having sufficient carrying ability
- Levelled horizontally and vertically
- T-upright having 3 pcs. standing feet to which the pressure is distributed evenly

When using

- Any load has to be evenly distributed on the entire load area
- Shelf brackets are hitched-on correctly and have to be identical in couples
- The equipment parts have to be compatible among them

Various

- Table values are not breaking values and have to be considered as guiding values for the recommended load
- Table values are thus not valid in case of point or push loads, but exclusively static load
- Table values are not valid in case of dynamic load, i.e. when driving, if the products are equipped with wheels
- Table values for upright deflection can be increased when using wall fittings, however, will be dependent on the nature of the wall and the fitting method
- On those products being not Wanzl Nordic products having load indications, the load values stated by the supplier are valid
- Wanzl Nordic reserves its right to changes in products and table values without notice.
